CV Information Detailed

Education :
-> 10th - D.A.V Public School - Central Board of Secondary Education - 9.8/10 CGPA - 2017
-> 12th - Maths, Physics, Chemistry - Sri Chaitanya Junior College - Telangana State Board of Intermediate Education - 937/1000 (93.7%) - 2017 - 2019
-> B.Tech - Metallurgical and Materials Engineering - National Institute of Technology Durgapur - 7.87/10 CGPA - 2019 - 2023

All Skills :
SOLID Principles, Data Modelling, EDW Modernization, ETL, Data Migration, Data Pipeline, Testing, Python, SQL, DBT, Data Structures and Algorithms, Teradata, Cobol, Google Cloud Platform, Data Vault, Google Cloud Storage, BigQuery, Cloud Composer, PySpark, Apache Airflow, Cloud Run, Data Flow, Git/Github, BitBucket, CI/CD.

Experience :

1. Quantiphi Analytics Solutions - Mumbai, Maharashtra - Jan 2024 - Present

Full Time - Framework Engineer - Data Engineer - Google Cloud Platform

---

1. Equinix - AI & Data Organization - Exasol to Bigquery Data Migration | Data Modelling
2. Definity - Insurance Claims - Mainframe to Bigquery Data Migration
3. HCA - Healthcare - Teradata to Bigquery Data Migration

-> Led a team of data engineers, taking part in structuring the tasks/work loads, guiding and helping the team in various tasks and developing multiple tables at the same time. Debugging/Identifying issues in the code at the project level pushed by developers.
-> Worked on a data modelling project, where we model tabular data into facts, dimensions and attributes using data vault concepts such as raw vault, business layer and gold layer. Helped the team create views on top of these tables and reports on these views. Which helped the client in much better visualisations, maintainability and scalability using their data.
-> Developed ETL pipelines from multiple data sources such as teradata, mainframe, snowflake to Google Cloud Platform using services as Cloud Composer (Apache airflow), Cloud Run, Bigquery, Storage Buckets, Cloud Run, Dataflow..
-> Created, debugged, optimized multiple Directed Acyclic Graphs (DAGs) to automate data processing for multiple clients.
-> Have experience in working with different environments and testing the ETL pipeline/process in Dev, QA and Prod.
-> Proficient with SQL analysis, conversions, optimising and error resolving/debugging.
-> Optimize one of the SQLs from a runtime of 12+ hrs to less than 10 mins.
-> Solid understanding of Git/Github.

-> Developed a DAG with a reporting and alerting mechanism for failures and un-triggered DAGs from the scheduled time to the concerned team, which helped the data team to identify core issues and take action on a promptly basis.
-> Followed clean code architecture and security principles by parameterizing variables, securing important access keys for multiple services and reading from them. Used yaml file, airflow variables for parameterizations.
-> Worked on data validation for the migration process ensuring the ETL pipeline is working accurately, no data loss in the process and record by record data matching for multiple tables in various datasets.
-> Analysed multiple cobol scripts, teradata SQLs and accurately converted them to SQLs for the data migration project from legacy mainframe to bigquery.
-> Handled and processed huge amounts of data from healthcare, insurance industry serving better visualizations, reporting and data analysis use cases.
Environment - Python, SQL, Teradata, Cobol, Google Cloud Platform, Google Cloud Storage, BigQuery, Cloud Composer, Apache Airflow, Cloud Run, Data Flow, Git/Github, BitBucket, CI/CD.

2. Quantiphi Analytics Solutions - Remote - Jan 2023 - Dec 2023
Intern - Framework Engineer - Data Engineer

---

1. Finance - Snowflake to Bigquery Data Migration

-> Learned to develop, test python scripts to automate data from source to target databases.
-> Worked on creating python ETL scripts to migrate data from snowflake to bigquery.
-> Used Informatica Intelligent Cloud Services (IICS) for data integration and performed various transformations to clean and structure the data for generating reports and analysis purposes.
-> Developed end-to-end data migration pipeline, tested it in dev and qa environment and successfully deployed it in production.
Environment - Python, SQL, Snowflake, IICS, Google Cloud Platform, Bigquery, Git/Github

3. Mudrika Finance Pvt Ltd. - Remote - Apr 2022 - Jun 2022
Intern - Full Stack Developer

-> Developed reactive front-end mobile app pages with react-native.
-> Optimised web page dashboard with responsive UI and changes for better user-experience.
-> Developed multiple APIs to process user-data. Added conditions for data verification and integrations of API with the front-end.
-> Developed a database model to store and process user-data for further analysis. Created fact tables and laid out dependencies to utilize the data after processing.
-> Worked on creating user-authentication and logging systems utilizing JWT tokens.
-> User state management for the entire product.
Environment - React native, ReactJs, NodeJs, PHP, MySQL, JWT

4. Dr. Reddys Laboratories Pvt Ltd. - Hyderabad, Telangana - July 2021 - Nov 2021

Intern - Backend Developer

-> Developed a webpage displaying millions of records for analysis.
-> Reduced the load of querying multiple times and increasing the compute amount by storing the fetched records in temporary cache storage.
-> User state management, authorization and authentication for the data access and display.
-> Reactive UI made for better visuals and user-experience.
-> Created multiple API to fetch millions of rows of data from bigquery as required, storing them in user browser storage to reduce cloud costing for the same.
Environment - ReactJs, NodeJs, BigQuery, Firebase

Projects:
Freelance - Career Choice Questionnaire - Full Stack Project
-> Developed a full stack web application which displays your most suited career based on behaviour analysis on the user.
-> Users answer multiple questions which determine their characteristics on the following parameters - resource utilization, attitude, personality and decision making (RAPD) model.
-> Added features are user-authentication, state management, session storage, report generation and download feature.
-> Questions are generated on a dynamic basis based on responses to starting questions.
-> Developed a backend API to store user-data in MySQL database for further analysis and better guidance.
Environment: VueJs, Flask, MySQL, Session storage, state management.

Freelance - Claims Automation - Full Stack Project
-> Developed robust APIs using .NET Core 8.0, adhering to the SOLID and Model-View-Controller (MVC) design principles, ensuring maintainability and scalability.
-> Collaborated and generated multiple user interface pages and reusable components in a Blazor WebAssembly project, delivering a seamless and intuitive user experience.
-> Took initiative in building the database, schema and dependencies in between various functions/APIs. Created multiple stored procedures to handle data manipulation and operations.
-> This project will help millions of people, reducing the average insurance claims process turnaround duration by 90%.
Environment: ASP.NET Core 8.0, MSSQL, Blazor, MVC, Entity Framework.

Academic Research:
-> Wrote a thesis on ETL (Extract - Transform - Load) demonstrating how it is changing the way data works. Its needs and use cases on automation data related tasks.

Certificates:
-> Google Cloud Certified - Associate Cloud Engineer - May 2023

-> Google Cloud Certified - Professional Data Engineer - Dec 2024
-> Google Badge - Generative AI for Developers - Mar 2025
URL - https://partner.skills.google/public_profiles/d414ca52-79f4-4db1-b315-fe4ff09d582a
-> Oracle Cloud - Foundations Associate | Oracle Certified - Nov 2023
-> Oracle Cloud - AI Foundations Associate | Oracle Certified - Nov 2023
-> Foundational C# with Microsoft | Free Code Camp Sep 2023
URL -
https://www.freecodecamp.org/certification/fcc955cbbd8-f37c-4dd4-9603-419674ad7de8/foundational-c-sharp-with-microsoft
-> Data Structures and Algorithms in Python | Udemy Dec 2021

VOLUNTEER WORK:
Open Source Contribution | Girlscript Winter of Contribution
– Contributed by adding well-documented solutions for Data Structures, C/C++, and Competitive Programming topics to their shared repository.

Position of Responsibility:
-> Head - Entrepreneurship Cell, Centre for Cognitive Activities (NIT Durgapur) – Lead a team of 50+ members with the motive to promote entrepreneurship among the students. Conducted various webinars, seminars, business plans, case-study and parliamentary debates. Motivating and bringing awareness among the young students towards entrepreneurship.

-> Senior Fest Coordinator - Aarohan Fest (NIT Durgapur) - I was a part of Team Aavishkar consisting of more than 150 students. Key responsibilities included - Leading, representing and encouraging our Entrepreneurship culture at NIT Durgapur. We take part in conducting a few of the most exciting events at this fest. Represented and promoted entrepreneurship culture, coordinating with 150+ peers to deliver high-impact events, seminars, and raised funds for NGO.

-> Sponsorship Head | Darpan, NIT Durgapur
– Took charge of promoting Hindi as a language and secured sponsorships to fund club activities and organize engaging cultural
events.

Hobbies:
Coding, Chess, Anime, Books

Languages:
English, Hindi, Telugu

—---------- Work Exp Data —----------

Professional Summary

Data Engineer with 3+ years of experience designing and modernizing enterprise-scale cloud data platforms on Google Cloud Platform (GCP). Experienced in delivering large-scale data migrations, building scalable ETL/ELT pipelines, and developing cloud-native data architectures using Python, SQL, PySpark, Apache Airflow, dbt, and Data Vault. Proven track record of optimizing data processing, enabling enterprise analytics, and delivering reliable, high-quality data solutions across healthcare, insurance, finance, and data center domains.

Experience

Data Engineer | Quantiphi Analytics Solutions Pvt Ltd. Jan 2023 – Present

• Enterprise Data Platform Modernization | Data Center Domain | GCP, dbt & Data Vault

– Successfully migrated 1,300+ enterprise tables, developed 200+ business views, and delivered 400+ Tableau reports by integrating data from Oracle, Exasol, DB2, and other enterprise sources into BigQuery, meeting delivery timelines.

– Led a team of data engineers by planning deliverables, reviewing code, resolving technical blockers, and coordinating parallel development across multiple data models.

– Designed and implemented Data Vault (Raw, Business, Gold) models using dbt, enabling scalable, maintainable, and analytics-ready data architecture.

– Developed complex SQL views for enterprise revenue reporting by implementing multi-stage validation and reconciliation logic, ensuring 100% data accuracy and consistent financial reporting.

• Legacy Data Modernization | Insurance Domain | BigQuery & PySpark

– Modernized legacy insurance platforms by converting Mainframe (COBOL) programs into optimized BigQuery SQL, migrating billions of records across 30+ enterprise processes with 100% reconciliation accuracy.

– Built scalable PySpark transformation frameworks on Dataproc Serverless for distributed processing of high-volume datasets, reducing manual intervention.

– Optimized Spark-based data processing workloads through partitioning strategies, query tuning, and efficient data transformations, reducing execution costs and improving performance by 25%.

• Healthcare Data Platform Modernization | Healthcare Domain | BigQuery & Apache Airflow

– Built and operated ETL pipelines using Apache Airflow (Cloud Composer) to migrate data from Teradata to BigQuery.

– Optimized complex SQL transformations, reducing execution time from 12+ hours to under 10 minutes through query
tuning and execution plan optimization.
– Implemented a centralized Airflow monitoring and alerting framework for 150–200 DAGs across 10–15 business teams,
automating failure notifications and improving SLA compliance.
• Cloud Data Migration | Finance Domain | Snowflake to BigQuery
– Built and deployed end-to-end data migration pipelines using Informatica IICS to migrate enterprise datasets from
Snowflake to BigQuery.
– Validated migrated datasets through SQL reconciliation, query optimization, and functional testing across Development
and QA environments, ensuring production readiness.
– Developed Tableau dashboards and business reports to support post-migration analytics and stakeholder reporting.

Technical Skills
Programming: Python, SQL, PySpark, COBOL (Legacy), LUA
Cloud & Big Data: Google Cloud Platform (BigQuery, Cloud Storage, Cloud Composer, Cloud Run, Dataproc Serverless)
Data Engineering: ETL/ELT, Data Pipelines, Data Migration, Data Modeling, Data Vault, dbt, Apache Spark, Data Validation / Quality
Workflow Orchestration & DevOps: Apache Airflow, CI/CD, Git, Bitbucket
Databases & Data Warehouses: BigQuery, Snowflake, Teradata, Exasol, DB2, MySQL, Tableau
